'...No shortcuts for success'

ADETEE SOKHI

■What inspired you to take up the profession of teaching?

Teaching profession is a noble profession. It was of my liking and I discovered some of my abilities during my graduation and post graduation from VNIT. I used to teach my juniors in various subjects and it gave me a lot of satisfaction. Also, teaching profession helps me in continuous updation of knowledge. It gives me an opportunity to adapt new concepts and technology.

■What drives you in this career?

Continuous advancement of technology and application of it in practical field drives me in this career. For any teacher it is very important to continuously update his knowledge and adapt new techniques of teaching learning process.

■Describe the biggest hurdle you have had to face in your path to success

Probably hurdle is not the correct word, rather I would say there were lots of challenges in my path of success. Biggest challenge was to remain updated in my area of specialisation with the advancement of technologies. Being principal of a professional college, one has to be good at academics as well as administration. At this level the challenges are at two levels. Administrative challenge for development of institute and academic challenge of maintenance of good academic environment.

■As an educationist, what is your personal approach towards teaching?

A teacher has to be honest with himself and well prepared in his subject of teaching. He should always ask himself, have I delivered sincerely? Have I satisfied queries of all my students? Have I done justice to the subject taught and if not then where should I improve? A teacher should make himself available for guiding, helping students to overcome their difficulties.

■Your views on the education sector in India...

I can talk at length but I will restrict myself on issues related to technical education only. As per HRD ministry government of India, there will be huge requirement of technical manpower by 2020. Keeping in view this requirement and to increase Gross Enrollment Ratio (GER), the apex body, All India Council for Technical Education (AICTE) New Delhi which regulates technical education in India has granted approval to many new professional institutes. Because of this, though

admission opportunities became easily available but quality of education went down. There is shortage of experienced and qualified faculties, which is a prime factor for maintenance of quality of education. Present scenario is such that, many engineering graduates are coming out with degrees but there is no placement. Statistics shows that only 25% graduates are employable. Due to mushrooming of professional institutes there are many vacant seats. Number of seats available are more than eligible students at qualifying examinations.

■A word of advice for today's youth?

Show willingness to hard work. Also they should prepare themselves to face failure. It is said that failure is the first step of success. They should set their goals and remain focused to achieve that goal. Short cut never leads to success. I would advice today's youth that if they strive hard for excellence today, they will definitely become successful tomorrow.

■Tips for students to excel in their career and life

My tips will be

- i) Be disciplined and patient
- ii) Be sincere and confident
- iii) Be focused on your goal
- iv) Develop habit of accepting failure
- v) learn from your mistakes
- vi) Respect your seniors/elders and lastly strive hard for excellence never use short cuts for success.

Dr. Sadanand S. Deshpande, Principal, Govindrao Wanjari College of Engg & Tech

■Your personal mantra for success in life and career

There is no mantra but you have to inculcate good habits in you like you should be sincere and honest with your work, be ready to accept challenges of career and life and be prepared for failure and learn from your mistakes.

■What according to you is the biggest mistake today's youth makes?

I think they want everything instantly. I feel many a times that today's youth are like fast food. As we know fast food is not good for our health, similarly being impatient for everything is dangerous.

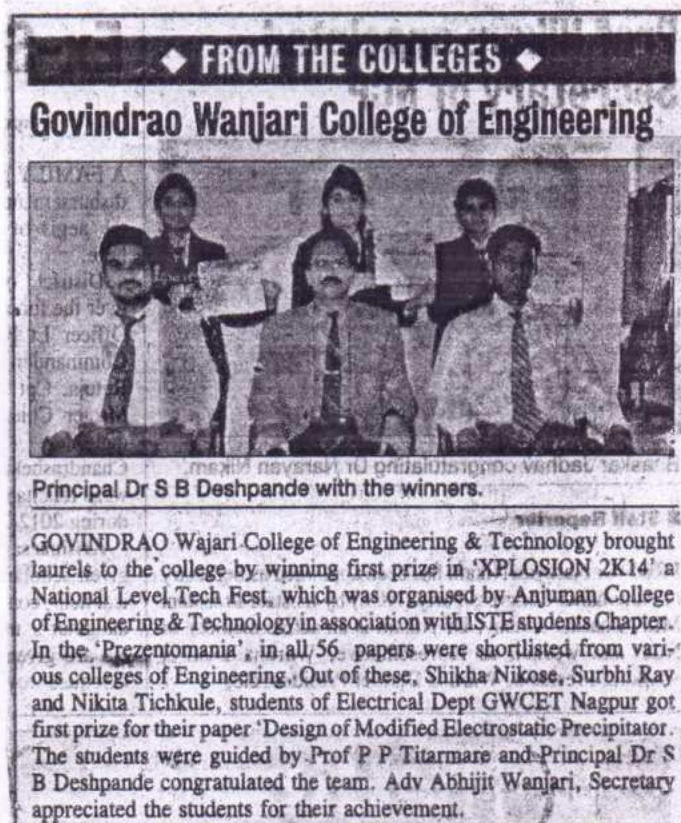

■What is the most effective way to motivate children and navigate them on the right career path?

You should listen to the children patiently. Respect the ideas they put forth. Do not impose your decisions on them rather I would suggest that help and support them so that they should develop the decision making ability. Don't behave like seniors/elders but be friends with them so that they should feel free to share their ideas/ views with you. Encourage them for good practices and celebrate their success be it small or big.
